

# Are you our new Alteryx developer?

Do you love to solve problems within the domains of data analysis and business intelligence?

Do you get motivated by working with large amounts of data and the potential it has for providing key stakeholders with crucial, value-generating insights?

Do you have an eye for finding structured, functional and elegant solutions to seemingly complex data analysis problems?

Do you love to solve hard, time-sensitive challenges in collaboration with dedicated colleagues - and do you enjoy celebrating your shared success?

If you can answer yes to these questions, then this position might be for you!

## As a candidate, you should:

- **Master** Alteryx workflow development - at least via one-two years of actual work experience, preferably more
- **Routinely** work within the areas of data analysis and business intelligence via experience from your studies and/or previous work (3 years or more recommended)
- Be **passionate** about solving hard, technical problems in a structured manner
- Be **familiar** working with varying data input/output and standards from data sources in the form of databases, APIs and files
- Be **excited** about technology and the impact it can create for others
- Take **pride** in the quality of your work via thorough and structured development, testing, deployment and documentation of the solutions you create
- Have **strong** verbal and written English skills
- **Collaborate** well within a team setting, composed of experts within respective domains, both technical and business related in nature

## The ideal candidate furthermore has:

- **Experience** both designing and implementing Tableau dashboards
- A **drive** towards learning other technical skills, such as high-level programming languages like R or python
- **Knowledge** of writing optimized database queries within e.g., SQL

## You will be tasked with:

- Designing, implementing, and testing complex workflows in Alteryx
- Integrating these workflows with numerous data sources and internal as well as external party systems (files, databases and APIs)
- Executing and delivering working Alteryx workflow solutions based on a well-defined set of requirements from several stakeholders within both business and technical domains
- Maintaining and operating Alteryx and Tableau solutions, and documenting them as well as their interaction points with internal and external IT systems
- Standardizing and modularizing an ever-growing number of existing and to-be-developed Alteryx workflows
- Ensuring and improving data processing speed within both Alteryx and Tableau solutions

To apply, please send us your motivational letter, resumé and transcripts to [ctl@prokura.dk](mailto:ctl@prokura.dk)
